SUMMARY

Senior Frontend Engineer with 5+ years of experience in fintech, specializing in Angular and TypeScript at scale. Led development of Credit & BNPL flows serving 10M+ users at Iran's largest digital payment platform. Architected 14 shared npm packages and established multi-layer testing strategies across 75-package monorepos. Experienced with React/Next.js, Vue/Nuxt, and NX monorepo architectures.

EXPERIENCE

Digipay, Tehran - *Senior Front-End Developer*

Dec 2021 - Present

- Led frontend development of Credit & BNPL journey serving +10M users, implementing complex multi-step financial flows with Angular and TypeScript
- Architected and published 14 internal npm packages, reducing cross-team code duplication and improving delivery speed across multiple product lines.
- Leading Credit & BNPL line front developers.
- Migrated three standalone Angular applications (web-wallet, credit, merchant-credit) into a unified NX monorepo with shared libs/ structure, consolidating dependencies and enabling cross-app code reuse.
- Established a multi-layer testing strategy across 75 shared npm packages: Karma/Jasmine unit tests for signal-based component logic and OnPush behavioral contracts, Playwright E2E tests for computed CSS, animation, and input-variant contracts, and a dual snapshot system (style .txt + visual .png) as backward-compatibility guards against regressions.
- Engineered a 7-step credit pre-registration state machine with conditional step-skipping logic, BehaviorSubject-driven reactive state, dynamic plan filtering by fund provider and collateral type, and bidirectional URL-step synchronization via query parameters.
- Built zero-dependency pinch-to-zoom, pan, and double-tap gesture directives for document image inspection, implementing multi-touch distance calculation, boundary-constrained CSS transforms, and requestAnimationFrame-throttled magnifier with rotation-aware coordinate mapping.
- Designed a Claude AI-assisted test generation pipeline for a 75-package Angular component library, engineering a 900-line reusable prompt specification (.claude/commands/write-package-test.md) that encodes testing principles, Angular signal

patterns, OnPush behavioral contracts, and Playwright pitfalls enabling consistent, high-quality test output per package.

- Adopted Angular 17 standalone components, OnPush change detection, and signal-based computed properties across the entire Credit/BNPL library, eliminating NgModule overhead and enabling a single abstracted codebase for both Credit and BNPL product lines.
- Implemented a custom Angular preloading strategy using route metadata (preload: true, critical: true) to load critical routes immediately post-bootstrap, alongside retryImport wrappers for network-resilient lazy module loading.
- Integrated multi-platform analytics (Google Tag Manager, InTrack, Sentry) behind a single EventManagementService abstraction, with Sentry configured for performance profiling, console-error capture, and domain-filtered reporting.
- Built a zero-maintenance test catalog CLI (generate-package-status.mjs) that auto-discovers unit and E2E specs across all 75 packages, counts individual test cases via regex, optionally runs test suites, and generates a typed TypeScript data file powering a live status dashboard — eliminating manual tracking entirely.
- Developed Digital sign by User that gets selfie video and pic.
- Developed [Mydigipay](#) website by Laravel & Angular.

Adowing, Tehran - *Front-End Developer*

Oct 2019 - Dec 2021

- Developed internal panels for the marketing team, accounting team & other departments.
- Built pixel-perfect in different sizes according to the design.
- Researched the agile approach with the product team and implemented it.
- Researched test methods like unit test, integration test, regression test & acceptance test.
- Researched clean code methods and developed products with them.
- Mentored a front-end developer intern.

Carnotic, Tehran- *Front-End Developer*

Oct 2019 - Dec 2021

- Implemented a highly responsive user interface for a freight forwarding platform.
- Built pixel-perfect in different sizes according to the design.
- Packed customized video player from “Talent academy” project and used in [Carnotic](#) simply.
- Implemented this Nuxt app for SEO purposes.
- Documented components and wrote test cases for all methods.

Freelance, Tehran- *Android Developer*

Oct 2014 - Oct 2015

- Developed 10 apps and published them in Cafebazaar, Myket and Candoo.

-
- Implemented with B4A (Basic for Android) that is based on VisualBasic language.
 - All applications were content-driven.

PROJECT

Pita-front (NX Monorepo ReactJS — Restaurant Kiosk + Kitchen Display)

Jan 2021 - Jun 2021

- Architected an NX monorepo with two independent React apps (customer self-service kiosk + kitchen staff display) sharing @pita/api and @pita/ui libraries, deployed via separate Docker images with nginx routing per app.
- Integrated Epson ePOS SDK for thermal receipt printing with automatic network→USB fallback: probes configured network IP first, then discovers USB printers by scanning localhost proxy ports, with mobile-device and browser-print fallbacks.
- Implemented real-time order synchronization between kiosk and kitchen using Laravel Echo + Pusher WebSockets, with a 10-second polling safety net and a live KDS (Kitchen Display System) board showing in-process vs ready orders.
- Engineered a zero-downtime version checker service for always-on kiosk hardware that polls /version.json with cache-busting headers every 5 minutes and forces a hard reload when a new build is detected — ensuring kiosks never run stale code without manual intervention.

Pharma (Angular 17 PWA — Prescription Drug E-commerce)

Jan 2021 - Jun 2021

- Developed a server-driven adaptive medical questionnaire engine supporting 4 question types (SingleChoice, MultipleChoice, FormFill, Terminate), where each question is dynamically fetched from the API based on the previous answer, enabling personalized prescription drug eligibility screening.
- Built a full Angular 17 PWA for prescription pharmaceutical e-commerce with signal-based session management (signal + computed replacing BehaviorSubject), CAPTCHA-protected authentication, multi-step drug selection/checkout flow, in-app order support chat, and Service Worker for offline capability.

Talent academy - *Front-End Developer*

Jan 2021 - Jun 2021

- Created an interactive video player with different features such as playlist, sending improve messages & praising instructors like Instagram live.
- Developed global authentication login for all internal platforms.

Majid (confidential) - *Front-End Developer*

Apr 2020 - Mar 2021

- Developed a full-featured online form builder that makes it easy to create robust forms and collect important data.
- Worked with complex JSON for project purposes.
- This product is similar to the [Jotform](#) platform.

EDUCATION

Islamic Azad University Central Tehran Branch, Tehran - *Computer Engineering - Bachelor*

2017 - 2022

Imam Sadiq highschool, Tehran - *Mathematics and Physics discipline - Diploma*

2013 - 2017

COURSES

Claude Code in Action - Feb 2026 - *Anthropic*

The Complete Guide to Becoming a Software Architect - Apr 2025 - *Udemy*

Angular - The Complete Guide (2024 Edition) - *Udemy*

UTACM-Cafebazaar Android Course - Winter 2019 - *Cafebazaar & University of Tehran*
