users on payment flows I own

7,400+

automated tests in suites I built

1 day → <1h

to write a full component test spec with AI

115

features shipped solo in 3 months

SUMMARY

Front-end developer with 5+ years of **TypeScript, React and Angular** in consumer fintech. At Digipay I owned the entire **Credit & BNPL front-end** for 4+ years and since July 2026 I am the **front-end owner of its payment (checkout) product** — flows used by **10M+ people** — working with product managers, designers and backend teams across many microservices. I have worked remotely as the front-end developer for **international teams in Canada and the UK**, I bring a testing mindset (7,400+ automated tests in suites I built), and I founded XPCard, a marketplace I built alone with **contract-first OpenAPI** APIs. Over the last year **AI has become central to how I build**: I wrote **20 Claude Code agents, skills and slash commands** myself across Digipay and XPCard, so AI does the heavy lifting while I keep architecture and review in my hands.

EXPERIENCE

Senior Front-End Engineer · Front-End Owner

Dec 2021 – Present

Digipay · Tehran, Iran

*Payments and credit arm of **Digikala Group**, Iran's largest e-commerce company.*

TypeScript Angular Nx RxJS Signals Playwright Node.js Claude Code

- **Front-end owner of Digipay's payment (checkout) product since Jul 2026**; before that I owned the entire **Credit & BNPL front-end** (Dec 2021 – Jul 2026). Flows used by **10M+ people**.
- Work daily with product managers, designers and the backend teams behind many microservices, and mentor the engineers on my lines.
- **Checkout E2E**: a Playwright suite that pays through the real backend — 47 wallet, credit, bank-gateway and error scenarios. It caught bugs that left users stuck mid-payment and a **double-payment risk**.
- **UI library testing**: built the whole test setup and the playground demo app for Digipay's 80-package UI library — **3,150+ Playwright E2E / visual tests**, 4,200+ unit tests and 770 visual baselines.
- **Framework upgrades**: moved both front-end monorepos from **Angular 17 / Nx 18 to Angular 22 / Nx 23** — the client monorepo (17 repos, 110+ Nx projects) and the payment monorepo (~1,150 files).
- **AI agents for UI work**: wrote dev → Figma QA → design-review agents on **Figma MCP**, with a shared lessons file, so dashboard screens are built and checked against the design automatically.
- **AI in the team workflow**: wrote Claude Code commands for **AI code review** of staging and production merge requests, and for writing and fixing component tests. A full test spec went from **1 day to under 1 hour**; library regressions reaching QA dropped to **near zero**.
- **Credit onboarding**: a 7-step credit state machine with conditional step-skipping and URL-synced steps, so users can resume a half-finished application.
- **Shared code**: architected **14 shared npm packages** used across product teams, and wrote Node.js tooling (test-catalog CLI, E2E report server).

MICROSERVICES & BACKEND JAVA / SPRING BOOT · REST

- Ship to the Java / Spring Boot services behind the credit products: Micrometer metrics for the onboarding service, a switch between two external credit-scoring engines, and production bug fixes covered by unit tests.

MOST IMPORTANT CHALLENGE

Merging two live payment apps into one without breaking a single URL

Credit and Web-Pay (~840 TypeScript files) had to become one app while real payments kept flowing. I designed a layout that moved every file **without editing its source**, kept every published URL working as a route subtree, ran both versions side by side behind nginx, then cut over in production with **no user-facing regressions**.

Founder & Software Engineer

Jul 2026 – Present

XPCard · Remote

*Gift-card and gaming-credit marketplace I built from scratch with AI agents; **1B+ toman GMV in its first two months**.*

TypeScript Angular Nx OpenAPI Java 21 Spring Boot Docker Claude Code

- Built the whole product alone: storefront, admin dashboard, chat-bot sales channel and SEO content site, live within three months.
- Storefront and admin in TypeScript on Nx: standalone components, signals, domain libraries with enforced boundaries, an RTL design system, Jest and Playwright.
- Traffic comes from organic search through a content site and technical SEO I built.

BACKEND & API OPENAPI 3.1 · JAVA 21 / SPRING BOOT · MYSQL · MONGODB · REDIS

- Designed **27 OpenAPI 3.1 contracts** as the only boundary between frontend and backend, with integer minor-unit money end to end.
- Built the order and payment core: multiple payment gateways, wallet, OTP login with JWT, and automated supplier fulfillment with signed webhooks.

MOST IMPORTANT CHALLENGE

Shipping a full product alone at team speed

I designed a **Claude Code multi-agent pipeline** (PM → architect → dev → QA → review) with guardrails the agents cannot skip: lint, tests, build and screenshot checks on every change. It delivered **~115 features in three months**, and I still review every merge myself.

Front-End Developer

Oct 2019 – Dec 2021

Adowing · Tehran, Iran

Vue Nuxt JavaScript Agile

- Built internal Vue panels for the marketing and accounting teams, pixel-perfect across screen sizes.
- Introduced agile practices with the product team and mentored a front-end intern.

Front-End Developer

Oct 2019 – Dec 2021

Carnotic · Tehran, Iran

Online freight-forwarding platform.

Nuxt SSR SEO

- Built a responsive, server-rendered Nuxt frontend chosen for SEO, with documented components and tests.

INTERNATIONAL PROJECTS

Front-End Developer

Sep 2026 – Present

Origins — Ethical payments & rewards wallet International · United Kingdom · Remote

UK fintech building a rewards wallet and BNPL access for credit-invisible consumers.

React Native React TypeScript

- Built the marketing landing pages; now building the **React Native mobile app** for the wallet, working remotely with the UK team.

Architect & Lead Frontend

2024 – 2025

Pita — Restaurant kiosk & kitchen display International · Canada · Remote

React TypeScript Nx WebSockets Docker

- Led the frontend for a **Canadian client**, working remotely in English with their team: a customer kiosk and a kitchen display in one React / Nx monorepo.
- Real-time order sync over WebSockets with a polling fallback, and thermal receipt printing with automatic network → USB fallback.

Front-End Developer

2024

RexRx — Online prescription pharmacy International · Canada · Remote

Angular 17 TypeScript PWA Signals

- Built the front-end of a **Canadian** online pharmacy for GLP-1 weight-loss treatments: a server-driven medical questionnaire for eligibility, multi-step prescription checkout and an installable PWA.

SKILLS

CORE	TypeScript 5y · JavaScript 6y · React / Next.js 4y · Angular 5y
BACKEND	REST / OpenAPI · Microservices · Java / Spring Boot · MySQL · MongoDB · Redis · Docker
AI	Claude Code · multi-agent workflows · MCP (Figma) · AI code review · AI test generation · project rules & slash commands
PROFICIENT	Node.js · Nx Monorepo · RxJS · Vue / Nuxt · Playwright · Jest · SCSS / Tailwind · PWA · SSR & SEO
TOOLS	React Native · GitHub Actions · Google Tag Manager · Sentry · Figma · Agile / Scrum

EDUCATION

B.Sc. Computer Engineering
Islamic Azad University, Central Tehran Branch, Tehran
2017 – 2022
