10M+

users on flows I own

5+

years in fintech
frontend

Lead

Credit & BNPL team

14

shared npm packages

Frontend engineer leading Credit & BNPL frontend at a 10M+ user fintech, with 5+ years across Angular and React in production. Setting technical direction, mentoring engineers, and shipping financial journeys that 10M+ people rely on daily. Open to roles on international teams — remote, hybrid, or on-site.

01 — EXPERIENCE

Digipay

Dec 2021 — Present

Senior Front-End Engineer

Tehran

Angular TypeScript NX Monorepo RxJS

- ▶ Led frontend for Credit & BNPL journeys serving 10M+ users — complex multi-step financial flows in Angular + TypeScript.
- ▶ Architected and published 14 shared npm packages, reducing cross-team code duplication and accelerating delivery across all product lines.
- ▶ Leading the Credit & BNPL line, mentoring engineers and setting the technical direction.
- 01 Migrated three standalone Angular apps into a unified NX monorepo with shared libs, consolidating dependencies and enabling cross-app code reuse.
- 02 Established a multi-layer testing strategy across 75 packages: Karma/Jasmine unit tests, Playwright E2E, and a dual snapshot system (style + visual) as backward-compatibility guards.
- 03 Engineered a 7-step credit pre-registration state machine with conditional step-skipping, BehaviorSubject-driven reactive state, and bidirectional URL ↔ step sync.
- 04 Built zero-dependency pinch-to-zoom, pan, and double-tap gesture directives — multi-touch distance calculation, boundary-constrained CSS transforms, rAF-throttled magnifier.
- 05 Designed a Claude AI-assisted test generation pipeline for 75 Angular packages — a 900-line reusable prompt specification encoding testing principles and Angular patterns.
- 06 Built a zero-maintenance test collection CLI that auto-discovers spec files, counts test cases via regex, and generates a typed data file powering a live status dashboard.
- 07 Adopted Angular 17+ standalone components, OnPush change detection, and signal-based computed properties across the Credit/BNPL library.
- 08 Implemented custom Angular preloading strategy using route metadata with retryImport wrappers for network-resilient lazy module loading.
- 09 Built biometric identity verification with selfie-video capture and liveness photo for digital document signing.

Adowing

Oct 2019 — Dec 2021

Front-End Developer

Tehran

Vue Nuxt Agile

- 01 Developed internal panels for marketing, accounting and other departments using Vue/Nuxt.
- 02 Researched and implemented agile process with the product team.
- 03 Mentored a front-end developer intern.

Carnotic

Oct 2019 — Dec 2021

Front-End Developer

Tehran

Nuxt SEO

- 01 Built a responsive freight-forwarding platform with pixel-perfect implementations.
- 02 Implemented a Nuxt.js app for SEO optimization.
- 03 Documented components and wrote test cases for all methods.

Pita

2024 — 2025 · Architect & Lead Frontend

Restaurant Kiosk + Kitchen Display System

React · NX Monorepo · WebSockets · Docker · TypeScript

Two-app React/NX monorepo for self-service restaurant ordering: a customer-facing kiosk and a kitchen display, sharing @pita/api and @pita/ui libraries, deployed as separate Docker images behind nginx routing.

- 01 Integrated Epson ePOS SDK for thermal receipt printing with automatic network → USB fallback — probes configured IP first, then scans localhost proxy ports for USB printers, with mobile-device and browser-print fallbacks.
- 02 Real-time order sync between kiosk and kitchen via Laravel Echo + Pusher WebSockets, with a 10-second polling safety net and a live KDS board showing in-process vs ready orders.
- 03 Zero-downtime version checker for always-on kiosk hardware — polls /version.json with cache-busting every 5 min and forces a hard reload on new builds.

Pharma

2024 · Frontend Engineer

Prescription Drug E-commerce PWA

Angular 17 · PWA · Signals · Service Worker

Full Angular 17 PWA for prescription pharmaceutical e-commerce with a server-driven adaptive questionnaire engine and offline support.

- 01 Server-driven adaptive medical questionnaire (SingleChoice / MultipleChoice / FormFill / Terminate) — each question fetched dynamically from the API based on the previous answer, enabling personalised eligibility screening.
- 02 Signal-based session management, CAPTCHA-protected auth, multi-step drug selection & checkout, in-app support chat, and Service Worker for offline use.

ALSO

Talent Academy Vue · Custom video player

Interactive video player with playlists, instructor feedback messages, and global SSO for internal platforms.

Majid Angular · Complex JSON

Drag-and-drop form builder (JotForm-style) — schema-driven UI with deep nested JSON handling and live preview.

CORE Angular 5y · React / Next.js 4y · TypeScript 5y · NX Monorepo 3y

PROFICIENT RxJS · Vue · Nuxt · Playwright · Karma/Jasmine · SCSS / Tailwind · PWA / Service Workers

FAMILIAR WebSockets · Pusher · Laravel Echo · Docker · Git · REST APIs · Figma · Agile/Scrum

B.Sc. Computer Engineering
