

Iman Amini

Senior Front-End Engineer

I build financial products that 10M+ people trust with their money.

Open to international roles • Remote / Hybrid / On-site • Fluent English

10M+

users on flows I own

5+

years in fintech frontend

14

shared npm packages shipped

75

package monorepo I help steer

Senior frontend engineer who turns complex financial journeys into flows that feel effortless. For the past five years I have built and led the Credit & BNPL frontend at Digipay — Iran's largest digital-payments platform — where the screens I own are used by more than 10 million people. I architect shared design systems, set technical direction, and lift the engineers around me. Equally fluent in Angular, React / Next.js and Vue, I learn new stacks fast and I am looking for an international team to do my best work with.

01 EXPERIENCE

Digipay

Dec 2021 – Present

Senior Front-End Engineer

Tehran

Angular TypeScript NX Monorepo RxJS Signals

- ▶ Lead the Credit & BNPL frontend — multi-step financial journeys in Angular + TypeScript that 10M+ people rely on every day.
- ▶ Architected and shipped 14 shared npm packages, cutting cross-team duplication and accelerating delivery across every product line.
- ▶ Set the technical direction for the Credit & BNPL line and mentor the engineers building it.

- 01 Unified three standalone Angular apps into a single NX monorepo with shared libraries — consolidating dependencies and unlocking cross-app reuse.
- 02 Established a multi-layer testing strategy across 75 packages: Karma/Jasmine units, Playwright E2E, and a dual snapshot system (style + visual) guarding backward compatibility.
- 03 Engineered a 7-step credit pre-registration state machine — conditional step-skipping, BehaviorSubject-driven reactive state, and bidirectional URL ↔ step sync.
- 04 Built zero-dependency pinch-to-zoom, pan and double-tap gesture directives — multi-touch distance math, boundary-constrained transforms, and an rAF-throttled magnifier.
- 05 Designed a Claude-AI-assisted test-generation pipeline for 75 packages, encoding our testing principles into a 900-line reusable prompt specification.
- 06 Wrote a zero-maintenance test-catalog CLI that auto-discovers specs, counts cases via regex, and feeds a typed data file powering a live status dashboard.
- 07 Drove adoption of Angular 17+ standalone components, OnPush change detection and signal-based computed properties across the Credit/BNPL library.
- 08 Implemented a network-resilient preloading strategy using route metadata with retryImport wrappers for lazy module loading.
- 09 Shipped biometric identity verification — selfie-video capture and liveness photo for digital document signing.

Adowing

Oct 2019 – Dec 2021

Front-End Developer

Tehran

Vue Nuxt Agile

- 01 Built internal panels for marketing, accounting and other departments with Vue / Nuxt.
- 02 Researched and rolled out an agile workflow alongside the product team.
- 03 Mentored a frontend developer intern.

Iman Amini • Senior Front-End Engineer

Nuxt SEO

- 01 Built a responsive freight-forwarding platform with pixel-perfect implementations.
- 02 Implemented a Nuxt.js app tuned for SEO.
- 03 Documented components and wrote test cases for every method.

02 PROJECTS

Pita

2024 – 2025 · Architect & Lead Frontend

Restaurant Kiosk + Kitchen Display System

React · NX Monorepo · WebSockets · Docker · TypeScript

A two-app React/NX monorepo for self-service restaurant ordering — a customer-facing kiosk and a kitchen display — sharing @pita/api and @pita/ui, deployed as separate Docker images behind nginx routing.

- 01 Integrated the Epson ePOS SDK for thermal receipt printing with automatic network → USB fallback, plus mobile-device and browser-print safety nets.
- 02 Real-time order sync between kiosk and kitchen over Laravel Echo + Pusher WebSockets, with a 10-second polling backup and a live in-process vs ready KDS board.
- 03 Zero-downtime version checker for always-on hardware — polls a cache-busted /version.json and forces a hard reload on new builds.

Pharma

2024 · Frontend Engineer

Prescription Drug E-commerce PWA

Angular 17 · PWA · Signals · Service Worker

A full Angular 17 PWA for prescription pharmaceutical e-commerce, built around a server-driven adaptive questionnaire engine with offline support.

- 01 Server-driven adaptive medical questionnaire (SingleChoice / MultipleChoice / FormFill / Terminate) — each question fetched from the API based on the previous answer for personalised eligibility screening.
- 02 Signal-based session management, CAPTCHA-protected auth, multi-step drug selection & checkout, in-app support chat, and a Service Worker for offline use.

ALSO SHIPPED

Talent Academy Vue · Custom video player

Interactive video player with playlists, instructor feedback messages, and global SSO for internal platforms.

Majid Angular · Complex JSON

Drag-and-drop, JotForm-style form builder — schema-driven UI with deep nested-JSON handling and live preview.

03 TOOLKIT

CORE Angular 5y · React / Next.js 4y · TypeScript 5y · NX Monorepo 3y
PROFICIENT RxJS · Vue · Nuxt · Playwright · Karma/Jasmine · SCSS / Tailwind · PWA / Service Workers
FAMILIAR WebSockets · Pusher · Laravel Echo · Docker · Git · REST APIs · Figma · Agile/Scrum
